- Heroku

## About

Web developer with a background in customer service and retail. Experienced with project management, time allocation, team communication, adaptability and problem solving. Have worked with JavaScript and third-party plugins such as React to build web applications. Always willing and eager to learn new technologies.

## Development Experience

### Tone.js Synthesizer

A browser based, monophonic synthesizer built for desktop with Tone.js and p5.js. Features include:

- Choice between sine, triangle, sawtooth and square waveforms
- Play notes with your computer keyboard
- ADSR amplitude envelope
- Choice between 8 different note ranges

### React Movie App

A single page application built with React that relies on a self-built RESTful API for the backend. User features include:

- Register an account, login, update profile and delete an account
- View a list of 10 movies with a description and information about the director and genre
- Add or remove movies from a favorites list

### Movie API

A RESTful API containing 10 movies built with Node.js, MongoDB, and tested using Postman. This non-relational database provides the backend for the React movie application.

## Work Experience
